ABSTRACT

This is a summary of external recognition achieved by the Saskatchewan Institute of Applied Science and Technology (SIAST). Data were collected as part of the institution's accreditation efforts and included information on three types of external recognition: (1) formal accreditation or program evaluation; (2) other external recognition of a program's curriculum; and (3) recognition of a specific course. In the category of formal accreditation, there must be an external accreditation body (either provincial or national) that examines the program's curriculum and delivery methods according to specified standards and then confers accreditation for a specific amount of time (usually 5 years). The other external recognition category includes recognition conferred by an external body or agency that is not a formal accrediting body, but that recognizes the quality of the whole program as meeting some external standards. Recognition of a specific course is achieved when a course within a program meets the standards of an external body. This report, updated annually, organizes information according to the SIAST program name, academic division, accreditation body, and current status within the accreditation process. (RC)

Introduction

The purpose of this report is to outline the various forms of external recognition that SIAST programs have achieved. External recognition is one important indicator of an excellent academic program at SIAST. This is encouraged through the program review policy 311 which states that "all SIAST programs shall seek the highest level of accreditation or program approval available".

This report presents a range of external recognition available:

1. formal accreditation or program approval;
2. other external recognition of a program's curriculum;
3. recognition of a specific course.

Formal accreditation

In this category, there must be an external accreditation body (either provincial or national) which examines the program's curriculum and delivery methods according to a specified standard. When the program meets the standard, it receives formal recognition from the accreditation body, and is given accreditation for a specific time frame usually five years. In the health field, the accrediting body is often called an approval body, and accreditation is called program approval.

Other External recognition

In this category, there may be an external body or agency that is not a formal accrediting body, but which recognizes the quality of the whole program as meeting some external standards. An example is the Saskatchewan Apprenticeship and Trade Certification Commission that recognizes that pre-employment trades programs meet the standards of the Apprenticeship programs.

Recognition of a specific course

Sometimes, a course within a program may meet the standards of an external body. In this case, the students will benefit from this additional recognition once they complete the course. However for this report, this is not related to any transfer credit agreements between SIAST and other post-secondary credit institutions. An example of this would be Computer Systems Technology courses that are certified by Novell.

This report is divided into these three sections to provide a comprehensive view of all the external recognition currently achieved by SIAST programs. This report is updated on an annual basis.

Section 1 - Formal Accreditation

PROGRAM NAME (CAMPUS)	DIVISION	ACCREDITED? YES/NO	ACCREDITATION BODY	STATUS
Architectural & Building Technologies (Palliser)	Technology	Yes	CTAB	3 years until November 30, 2002 -Biennial review to be submitted February 2003
